DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 are rejected under 35 U.S.C. 102(b) as being anticipated by Pulvari (US 4,365,106). Pulvari shows (fig. 4) an integrated circuit comprising a regulated power supply including a pyroelectric capacitor (10).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pulvari (US 4,365,106) in view of Ikura et al. (US 6,528,898). Given the invention of Pulvari as noted above, he does not show a heater capability or an output circuit. Ikura et al. show (fig. 7) a circuit comprising a regulated power supply including a pyroelectric capacitor (63).

The device further comprising a heater (Hot Water), thermally coupled to the capacitor (63), and a circuit (flow switches) for causing the heater to apply heat pulses to the pyroelectric capacitor (63).

Allowable Subject Matter

Claims 3 and 6-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to show a heater that includes a thin film dissipating element on a plate of the pyroelectric capacitor, a circuit including voltage sense used for feedback or servo operation controlling the heat cycles to the pyroelectric capacitor.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining prior art cited reads on at least some aspects of the claimed invention.
